**Leaders in fully integrated  
video surveillance solutions**

## About us

*“We bring together more intelligent solutions that can proactively anticipate and reduce issues, using a combination of innovative software and powerful hardware, that can scale to business demands. Enabling a rapid response to security risks is key to better safety management.”*

- Costa Boukouvalas, CEO

AgilityGrid is a Dubai-based company founded in 2010 that specialises in delivering customised Video Surveillance hardware and software solutions across the EMEA region. We provide leading-edge technology that is seamlessly integrated into a unified platform while ensuring our products meet the highest performance quality standards and deliver unparalleled ROI.

# What we do

## Centre of Excellence

All hardware and software is integrated and customised in our Centre of Excellence, to ensure it seamlessly works together and is tested to maximise performance and reduce TCO.

## Large-scale solutions for both Government and Private Sectors

Our video surveillance clients include Law Enforcement Agencies, Military, Transportation, Banks, Retailers, Property Developers, Educational Institutions, Hotels, Hospitals and the Travel Sector.

## Expertise and professional services

Our expert team and fully certified engineers will design the optimal solution to meet your business needs. We also provide full consultancy services including implementation, extensive training, follow-up and on-call customer service.

# Our products

## Fully integrated video surveillance

- Purpose-built video storage and servers
- IP cameras
- Video Management Software (VMS)
- Video Analytics Software
- Infrastructure monitoring
- SMART Transportation Solutions

## IP cameras

Our systems are designed to work effectively with High Definition and 4K resolution IP cameras. We offer a range of camera solutions and can recommend the most effective product to fit your needs and budget.

Product partners include

We work closely with all leading VMS providers and are a worldwide distribution partner with Milestone Systems.

All of our hardware and software solutions are designed to seamlessly integrate with these enterprise platforms.

- Manage 1000s of cameras with ease
- Centrally manage all security systems including remote sites
- Fully secure – assign rights and privileges for different sites with full encryption
- Reliable - 24/7 availability for critical sites

## Video Management Software (VMS)

Video Management Software is the central open platform that manages all of your IP cameras and recording units, access controls and more, in a way that is simple for the operator.

# Our products

## Video Surveillance appliances with accelerated performance

Our range of high-performance purpose-built, reliable and ready-to-run physical security platforms, feature award-winning technologies. Developed by Intransa, the founders of IP video storage technology, the Intransa video surveillance platforms bring simplicity, cost savings and reliability to physical security needs.

Intransa appliances are fully certified with industry-leading vendors and come pre-loaded with video management software, access control, video analytics, monitoring and other physical security applications to reduce installation costs, risk, complexity, and overall equipment needs, making installation faster and easier.

 <p><b>VISIBILITY</b> Unique suite of monitoring tools to view, monitor and diagnose system conditions in real time</p>	<p><b>100%</b> <b>FOCUS</b> on Video Surveillance and Physical Security</p>	<p><b>RELIABILITY</b> Self-healing technologies significantly reduce drive failures and downtime</p> 
<p><b>PERFORMANCE</b> VSOP technologies reduce latency. Significantly increases write performance</p> 	<p><b>AWARD-WINNING TECHNOLOGIES</b></p> 	<p><b>3 YEAR WARRANTY</b></p> 
<p><b>CERTIFIED</b> Our products are pre-tested and certified with all major VMS</p> 	<p><b>COMPLETE SOLUTION</b></p>  <p>Our products include video storage servers, video viewing/administration servers and high performance, high capacity, highly reliable storage products</p>	<p><b>SCALABILITY</b></p>  <p>Simple scalability easily expands to accommodate longer retention needs, more cameras and increased resolutions</p>
<p><b>VIDEO OPTIMISED</b> Our products are designed to exceed all VMS performance and reliability requirements while being cost-effective</p> 	<p><b>2500+</b> customers worldwide</p> 	<p><b>NO FRAME LOSS</b> Allows for continuous performance</p> 
<p><b>READY TO RUN</b> Can be installed in minutes</p> 	<p><b>CHOICE</b> A range of video analytics can be pre-loaded</p>

# Our products

## Video Analytics Software – for SMART surveillance

Video Analytics Software is changing the face of the Video Surveillance industry. It automates many of the video surveillance functions to identify security breaches and issues more readily. This helps increase the productivity of the operators and reduces chances of oversights and errors.

## High performance drives

Quality hard drives are integral to the performance of your Video Surveillance storage which is why we recommend Seagate Enterprise drives to our clients.

### Suspect tracking software

- Connects and tracks activity across 1000s of cameras and multiple surveillance areas in real time
- Improved operator productivity – suspect activity can be followed more easily and responded to more quickly
- Automatically records and stitches video activity together
- Easily exports video for evidence and reporting
- Integrated with all major VMS systems

### Facial recognition

A non-invasive way to track suspects through your CCTV network. Our facial recognition software effortlessly captures multiple faces both in real-time and on recorded footage. Perfect for airports, metro stations, shopping malls and sports stadiums. It recognises faces of suspects and provides alerts.

### Abnormal behaviour, perimeter and thermal detection

Automatically analyses live feeds from the entire camera surveillance network. Identifies and alerts the operator of any unusual behaviour in real time. This means that more incidents and risks are detected, saving your business and money in the long run.

### Application failover protection

Protects the surveillance network from downtime. This software detects and responds to the broadest range of failures, automatically taking the most appropriate corrective action to keep the network running.

### Mobile information and incident management

A full mobility solution that helps manage incidents and emergencies in the field. It can be used to monitor, track and report on incidents and is fully integrated in the CCTV platform.

Seagate Enterprise drives carry a high capacity and have been tested and optimised alongside our storage systems achieving the lowest failure rate of any storage - currently less than 1%.

Infrastructure monitoring software analyses network bandwidth use in real-time, to quickly detect and resolve performance issues.

- Minimise network downtime
- Detect missing video
- Improve operational efficiency with dashboards, alerts and reports
- View performance, traffic and configuration details of devices
- Measure and benchmark KPI performance over time
- Forecast capacity

## IT and CCTV Infrastructure Monitoring Software

Keep your surveillance network running efficiently and minimise downtime and disruptions.

## SMART Transportation Solutions

Innovative hardware and software for onboard passenger information systems, safety and security and all aspects of traffic management.

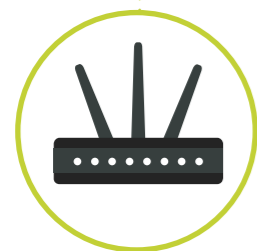

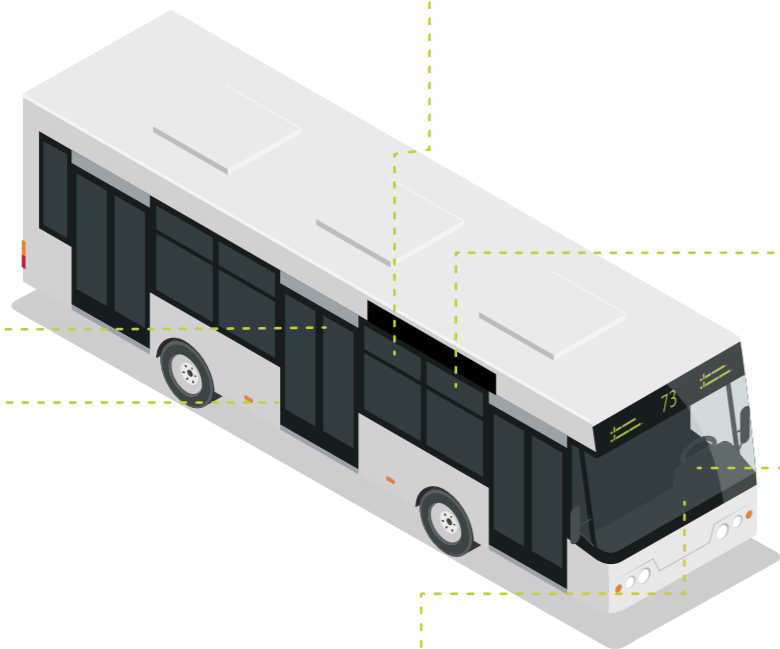

Cameras for video surveillance

Passenger audio messages

Interior information  
Onboard navigation

Passenger Connectivity  
WiFi

Video intelligence  
software

AVM light:  
Tablet interface

### Onboard Passenger Information Systems

Widescreens and mobile apps that provide passengers with useful real-time travel information and infotainment throughout their journey. This can include maps with rich content, including nearby landmarks, events and places of interest, weather and traffic updates, route maps and journey progress.

### Traffic data analysis software

Using video surveillance cameras, GPS, radar, motion detectors and more, this software can be used to analyse traffic patterns, number plate detection, parking enforcement and much more. It delivers complete road safety, security and operational intelligence.

### Automated Vehicle Management System

Allows you to track the movement of vehicles including key vehicle activities such as distance travelled, arrival times and more.

### Passenger safety and security

Monitor passenger flow and activity with our passenger counting software and behaviour analytics software. Stream video surveillance footage from your vehicles to your headquarters.

### Smart bus stops

Highly efficient solar powered signs that allow passengers to interact with the display to access the most relevant information.

- Low power consumption, edge-lit, LCD displays
- Energy efficient cellular communications
- Allows integration with third party central system

### Onboard WiFi

Provide a fast and reliable mobile data connection to your moving vehicles. Passengers will enjoy better onboard WiFi connectivity while you can track and receive data from your fleet more easily.
